

Allatoona Creek Greenway Trail Scoping Study

Community Open House #2

April 1, 2025

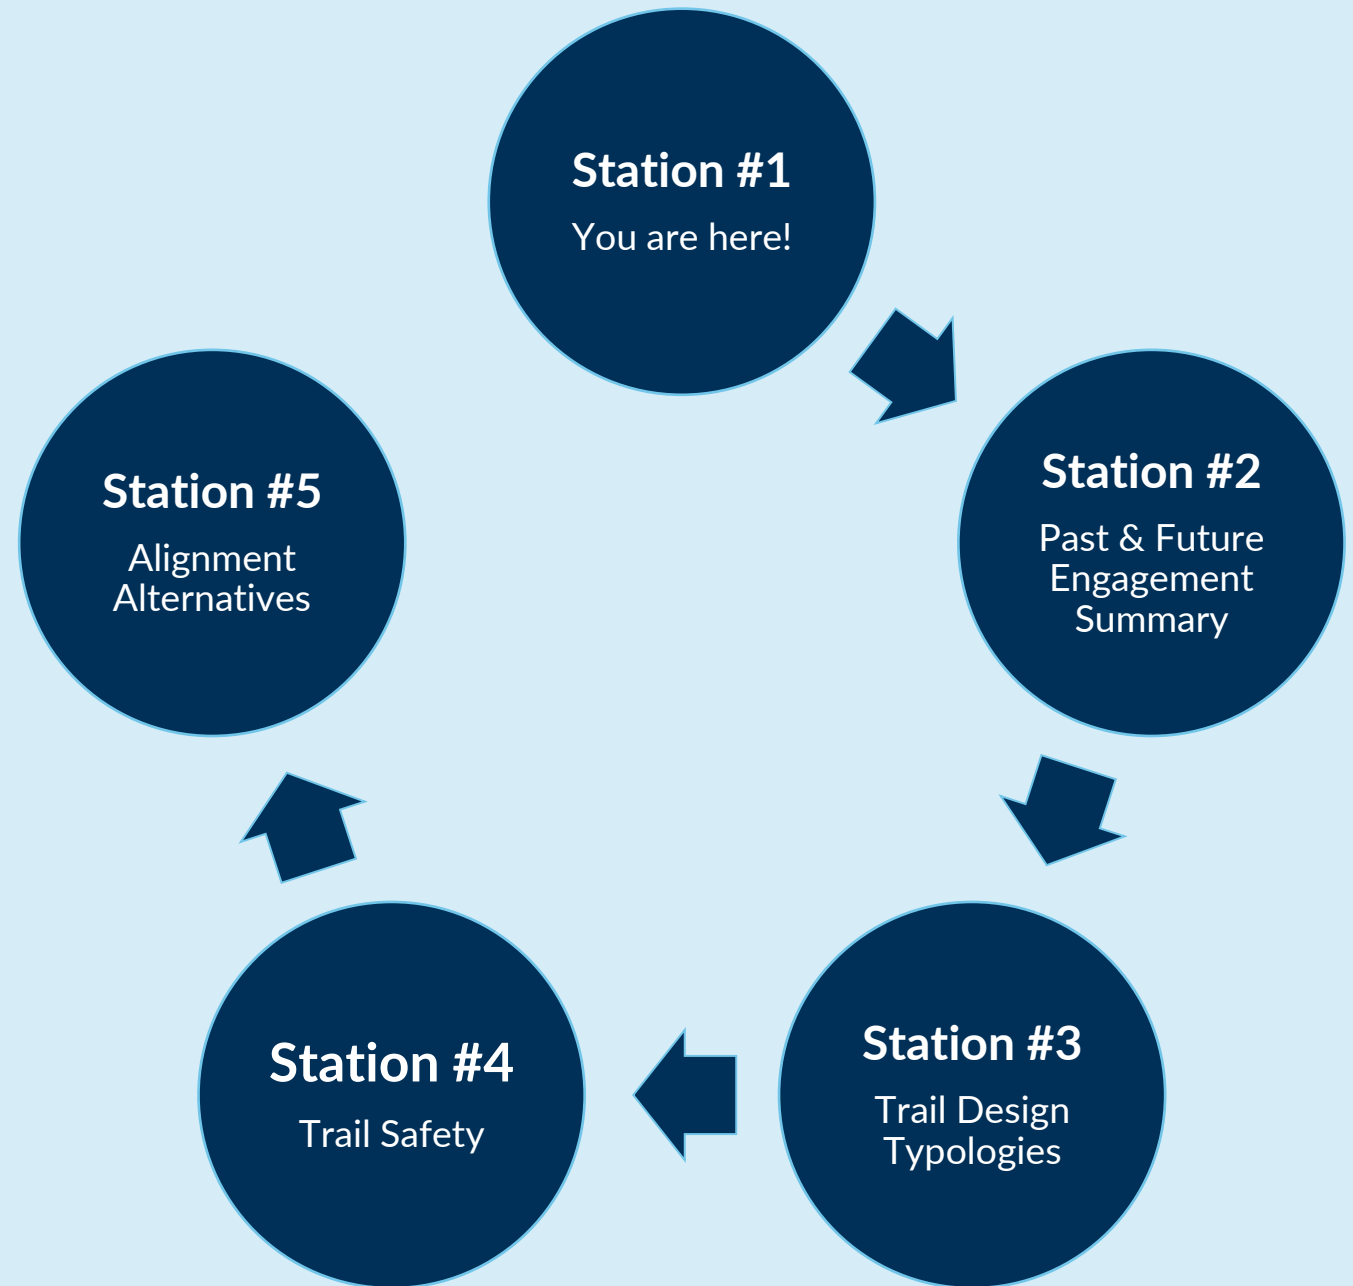

Why We're Here

1. **Prior feedback has resulted in the development of high-level potential options for a possible Allatoona Creek Greenway!**
 - *Options being considered now are still preliminary ideas, and subject to change.*
 - *Options will be refined into a concept as part of this study.*
 - *The greenway may be advanced to engineering if funding is identified.*
2. **We're here today to provide feedback on those high-level potential options!**
3. **The feedback heard today will then inform which potential option(s) is advanced to the Draft Concept phase.**

Today's Format

Today's meeting follows a "trail" – with five stations along the way!

The goal is to provide informed feedback on the high-level alternatives presented on the roll plot!

Things to Consider:

- How would each alternative connect places that have been shown to attract cyclists or pedestrians (schools, parks, local points of interest, etc.)?
- Begin to think about how trail users might access each alignment alternative (i.e. potential community connections).
- Many of today's boards contain information on the proven benefits of trails and greenways for nearby residents
- There are also boards that directly address concerns we've heard previously (such as access management and safety).

Don't forget to comment!

All attendees are encouraged to provide feedback via the comment forms provided today (or via the project website: cobbcounty.org/acgstudy)

Thank you!
